to the Commission
Rule 144
Andreas Schwab (PPE)

Subject: Generative AI and large language models (LLMs)

With the emergence of generative AI, which will transform how we live and work, large language models (LLMs) are becoming embedded in all devices, from smartphones to PCs. They enable the devices to speak our language and respond to our requests accordingly.

1. How can we guarantee that EU users will be able to easily choose the LLM on their devices that best corresponds to their local, regional and national language, and that reflects their culture?

2. How can we ensure that there is a level playing field for all LLMs on our devices?
