

**Question for written answer E-004235/2025  
to the Commission**  
Rule 144  
**Christian Doleschal (PPE)**

**Subject:** Application of the Construction Products Regulation (CPR 2024) to products covered by European assessment documents (EADs) and European technical assessments (ETAs)

1. How can it be ensured that the harmonised data sets for global warming potential (GWP) values and the new general formats for EADs and ETAs are published sufficiently early to ensure data comparability and planning security, and can existing data from environmental product declarations (EPDs) be used for lifecycle analysis under CPR 2024?
2. Who will be responsible for the forthcoming adoption of the complementary product category rules (cPCR), when will the guidelines on the requirements for digital provision and machine-readable processing of information under CPR 2024 be published, and will these guidelines be submitted to the industry and assessment bodies before the deadline for application of 8 January 2026?
3. How will the legal status of ETAs that have been adopted by the European Organisation for Technical Approvals (EOTA) but not yet cited in the Official Journal by 8 January 2026 be regulated, and when can details of the promised ‘cover sheet solution’ and the publication of the EADs already scheduled for citation be expected?
