

**Question for written answer E-004413/2025
to the Commission**
Rule 144
Dimitris Tsiodras (PPE)

Subject: Strengthening the funding and mandate of the European Union Agency for Cybersecurity (ENISA)

The EU is facing an increasing number of large-scale cyberattacks, with the economic cost of cybercrime expected to exceed USD 10.5 trillion globally by 2025.

Indicatively, 20 % of these attacks target public administration organisations, followed by transport (11 %), financial services (9 %), digital infrastructure (9 %), business services (8 %) and manufacturing (6 %).

The European Union Agency for Cybersecurity (ENISA), based in Athens, plays an important role in responding to these attacks, ensuring a high level of cybersecurity and strengthening the resilience of the EU. It must be able to adapt to the growing challenges and to tasks such as coordinating responses to such crises, overseeing cybersecurity certification for critical infrastructure and ensuring uniform application of cybersecurity standards across the single market.

In light of the above:

1. How does the Commission intend to strengthen the mandate of the Agency, taking into account the new tasks assigned to it as a result of recent cybersecurity legislation?
2. Is the Commission considering the possibility of boosting its funding in order for it to perform its role more effectively?
