Question for written answer E-004531/2025
to the Commission
Rule 144
Moritz Körner (Renew)

Subject: Net new debt

1. According to the Commission's information, what proportion of the net new debt taken out by euro area Member States is being used to pay interest on existing government debt this financial year? Could the Commission also provide the overall average and a breakdown of this total by each euro area Member State?

2. What developments have there been in this proportion since 2008?

3. What conclusions does the Commission draw from these developments in respect of the sustainability of public finances and the fiscal leeway open to the Member States?
