

**Question for written answer E-004751/2025
to the Commission**

Rule 144

Carmen Crespo Díaz (PPE), Dolors Montserrat (PPE)

Subject: Health risk management and coordination regarding outbreak of African swine fever

Following the first outbreak of African swine fever (ASF) detected in Spain, there have been preventive closures in more than 60 municipalities and extraordinary health control measures have been taken. The situation has raised concerns among livestock organisations about the need for effective coordination between national and regional administrations regarding wildlife management and the consistent application of biosafety protocols.

1. Has the Spanish Government ensured immediate coordination with the Commission in order to implement joint security reinforcement mechanisms between the Commission, the Ministry of Agriculture and the Regional Government of Catalonia following the detection of the outbreak in Collserola?
2. Has the Spanish Government requested the dispatch of European veterinary assessment teams to verify the containment of the virus and provide technical advice on the deployment of additional measures?
