to the Commission**
Rule 144
Krzysztof Brejza (PPE)

Subject: Systemic risks of AI-generated disinformation on TikTok – Poland

At present, there is growing concern regarding the large-scale dissemination of AI-generated content on TikTok that promotes disinformation narratives undermining the EU and democratic processes. In particular, Polish-language videos generated using artificial intelligence have circulated widely on the platform, calling for Poland's withdrawal from the EU ('Polexit').

The characteristics of this content, including its volume, coordinated distribution patterns, and the use of synthetic voices and personas, suggest the possibility of an organised disinformation campaign. According to Polish authorities, such activity poses a tangible risk to public order, information security and the integrity of democratic debate, not only in Poland, but across the EU.

Given this situation:

1. What supervisory measures does the Commission envisage to ensure that TikTok, as a Very Large Online Platform, fully complies with its obligations under the Digital Services Act¹, particularly with regard to systemic risk mitigation and transparency concerning AI-generated content?
2. Is the Commission considering initiating a formal investigative procedure under the Digital Services Act in order to assess whether TikTok's current practices adequately address the risks associated with coordinated disinformation campaigns?

Submitted: 9.1.2026
