E-002267/2025
Answer given by Mr Kubilius
on behalf of the European Commission
(10.9.2025)

The Commission does not intend to do so:

Member States gather knowledge or documentation about unidentified anomalous phenomena according to the national security needs.

The Commission and the High Representative for Foreign Affairs and Security Policy remain dedicated to the safety and security of the space environment. In particular, the Commission is committed to enhancing the EU space situational awareness capabilities, within the remit of the EU Space Regulation¹ and in line with its recent proposals for the European Competitiveness Fund, without prejudice to national competences.

Additionally, the EU Aviation Safety Agency (EASA) and national civil aviation authorities may receive safety reports on unidentified airborne objects that may endanger civil aviation safety.

The collected safety occurrence reports are stored in a central repository and analysed for safety purposes only. Reporting, storing and analysis of civil aviation occurrences are governed by Regulation (EU) No 376/2014 of the European Parliament and of the Council of 3 April 2014 on the reporting, analysis and follow-up of occurrences in civil aviation².
