**Question for written answer E-003918/25
to the Commission
Benoit Cassart (Renew)
(7 October 2025)**

Subject: EU-US political agreement: purchase of USD 750 billion worth of energy

Did the Commission take existing contracts with other suppliers into consideration when agreeing to purchase USD 750 billion worth of US energy products (LNG, oil and nuclear fuels) over a period of three years?

Submitted: 7.10.2025

**Answer given by Mr Jørgensen on behalf of the European Commission
(7 January 2026)**

The political agreement ⁽¹⁾ between the EU and the United States (US) includes a mention of the intention to procure energy from the US. This includes oil, gas, and nuclear technologies, fuels, and services. These energy imports are expected to have a total value of around USD 750 billion (ca. EUR 700 billion) through 2028.

The governments of EU Member States, the EU, and the US government themselves do not buy nor sell energy. The purchases are intentional estimates that would be the result of commercial decisions by private companies, also considering existing contracts they might have with suppliers in the US and elsewhere.
