E-004463/2025

Answer given by Ms Kos
on behalf of the European Commission
(13.1.2026)

The Commission, in coordination with Member States, European development banks and international partners, is delivering financial and technical assistance to Ukraine through well-established mechanisms. Since February 2022, the EU has provided over EUR 3 billion specifically to strengthen Ukraine's energy security.

Through the EU Civil Protection Mechanism (UCPM)¹, with coordination and operational support provided by the Emergency Response Coordination Centre², the Commission is facilitating the donation of in-kind energy-related assistance to Ukraine from Member States and UCPM Participating States. This includes material for repairs of the electricity grid and large equipment, such as decommissioned power plant parts, generators and transformers, in addition to EU-fully financed rescEU stockpiles. The UCPM also supports donations from private and third country partners via its rescEU Private Donations Scheme.

The Ukraine Facility³ via the Ukraine Energy Support Fund focuses on physical protection and urgent repairs, particularly in vulnerable regions. Higher electricity export capacity increases Ukraine's security of supply during winter. The Commission has also allocated an extra EUR 40 million in humanitarian funding to help with solid fuels, heating appliances and insulation. The Ukraine Facility recently mobilised close to EUR 1 billion of loans and grants for emergency gas purchases to cover the deficit caused by targeted attacks.

Following the adoption of the 19th sanctions package against Russia on 23 October 2025, work has already begun on the 20th sanctions package.
