**Question for written answer E-001171/26
to the Commission
Christian Doleschal (PPE)
(20 March 2026)**

Subject: Implementation of Regulation (EU) 2024/3110 and delays in the publication of European Assessment Documents

The timely availability of European Assessment Documents (EADs) and European Technical Assessments (ETAs) is essential for the placing on the market of innovative construction products, in particular where no harmonised standards exist.

Stakeholders report that since the entry into force of Regulation (EU) 2024/3110 ⁽¹⁾ (Construction Products Regulation — CPR 2024), the development and publication of new EADs have been delayed because of missing implementing provisions, notably regarding sustainability and digital requirements. These delays risk slowing down construction, renovation and infrastructure projects and may negatively affect innovation and competitiveness in the European construction sector.

The Commission is asked:

1. Which legal, technical or operational prerequisites for the development and publication of EADs under CPR 2024 are not yet in place, and when does the Commission expect them to be available?
2. Given that not all CPR 2024 requirements are fully implemented, is the Commission considering transitional measures to allow the continued development and publication of EADs?
3. What measures will the Commission take to prevent a regulatory gap that could delay innovation and increase the cost of construction and infrastructure projects before CPR 2024 becomes fully operational?

Submitted: 20.3.2026

**Answer given by Executive Vice-President Séjourné on behalf of the European Commission
(13 May 2026)**

For the publication of a European Assessment Document (EAD), a delegated act for assessment and verification systems (AVS) has to be in place.

The Commission is currently preparing this act. Its draft has already been discussed extensively with Member States and stakeholders, and it will be sent for Council and Parliament scrutiny soon. The format of European Technical Assessments (ETA) ((EU) 2026/387) has been published on 23 February 2026.

There are no prerequisites missing for the development of EADs under Construction Products Regulation (CPR-2024) ⁽¹⁾. The new aspects of CPR-2024 (predetermined environmental essential characteristics, machine readability and guidelines for general product information, instructions for use and safety information) will be stipulated in the process of EAD development by the European Organisation for Technical Assessment (EOTA). The Commission will assess those aspects for each draft EAD when submitted to the Commission according to Annex VI point 8 of CPR-2024.

Until now EOTA has only informed the Commission about two EAD work programmes according to Annex VI point 3 ⁽²⁾. So far, the Commission has not received any draft EAD for assessment according to Annex VI point 8 or 9 ⁽³⁾. Therefore, there is no delay in the publication of EADs.

Furthermore, manufacturers actively continue to use the published EADs under the CPR-2011 ⁽⁴⁾ for issuing new ETAs. This possibility will continue to be available for manufacturers until 8 January 2031. It is also important to note that during 2025 the Commission published 110 EADs which are now available for issuing ETAs.

Therefore, no regulatory gap exists that would require proposing transitional measures.

¹ Regulation (EU) 2024/3110 of the European Parliament and of the Council of 27 November 2024 laying down harmonised rules for the marketing of construction products and repealing Regulation (EU) No 305/2011 (OJ L, 2024/3110, 18.12.2024, ELI: <http://data.europa.eu/eli/reg/2024/3110/oj>).
